

Data Visualisation

Amit Kapoor
@amitkaps

Interaction

Animation (Motion)

Use of Motion

- Visual variable to encode data
- Direct attention
- Increase engagement
- Understand state transitions
- Understand system dynamics

Encode Variables

Powering the World

Each flash represents a turbine turning on at some location in the world.

The wheel is arranged according to capacity of the turbines.

Motion Pre-attentive

Pre-attentive, stronger than color, shape, ...

More sensitive to motion at periphery

Similar motions perceived as a group

Smooth at 24fps

Selective Attention

Source: Daniel Simons

Principles of Animation

SQUASH & STRETCH

STAGING

ANTICIPATION

STRAIGHT AHEAD & POSE TO POSE

FOLLOW THROUGH & OVERLAPPING

SLOW IN & SLOW OUT

Animation in Data Viz

Make all motion meaningful

Avoid squash-stretch, exaggeration

Use consistent visual marks

Use simple transition - anticipation
and staging

Do one thing at a time

Consistent Visual Marks

Consistent Visual Marks

Consistent Visual Marks

Change of Axis

Animation Helps

Two sides of Animation

Direct

Attention

Distract

Easy Track

Constancy

False Relations

Cause & Effect

Causality

False Agency

Enhance Interest

Engagement

“Chart Junk”

Right: Interesting

Speed

Slow: boring

Fast: errors

Interaction Layer

How do you drink water?

If you can find the button

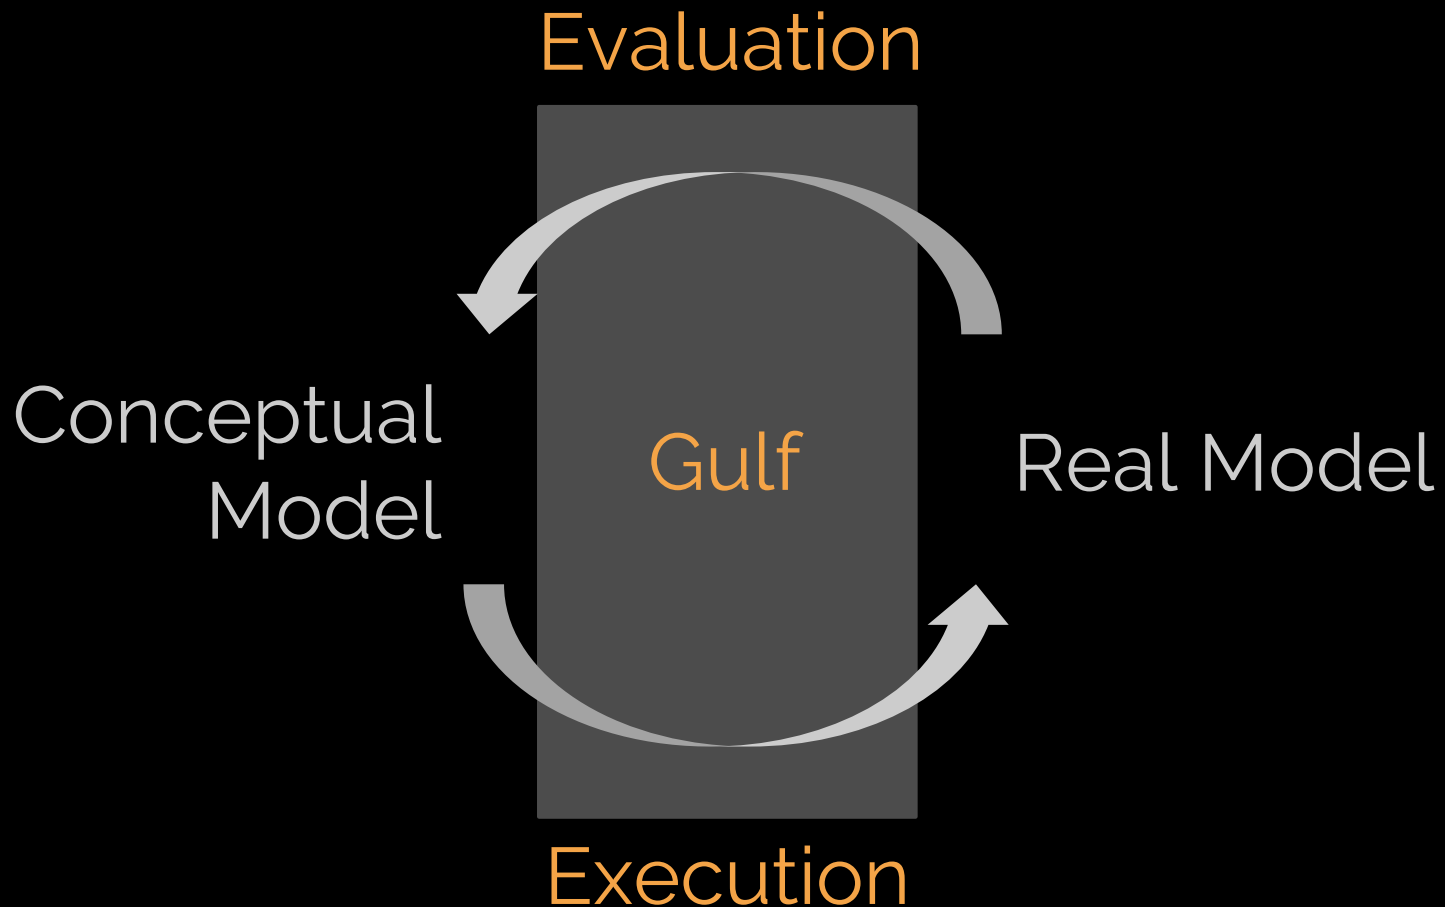

Should you push or pull?

Norman Doors - Affordance

Shared Understanding

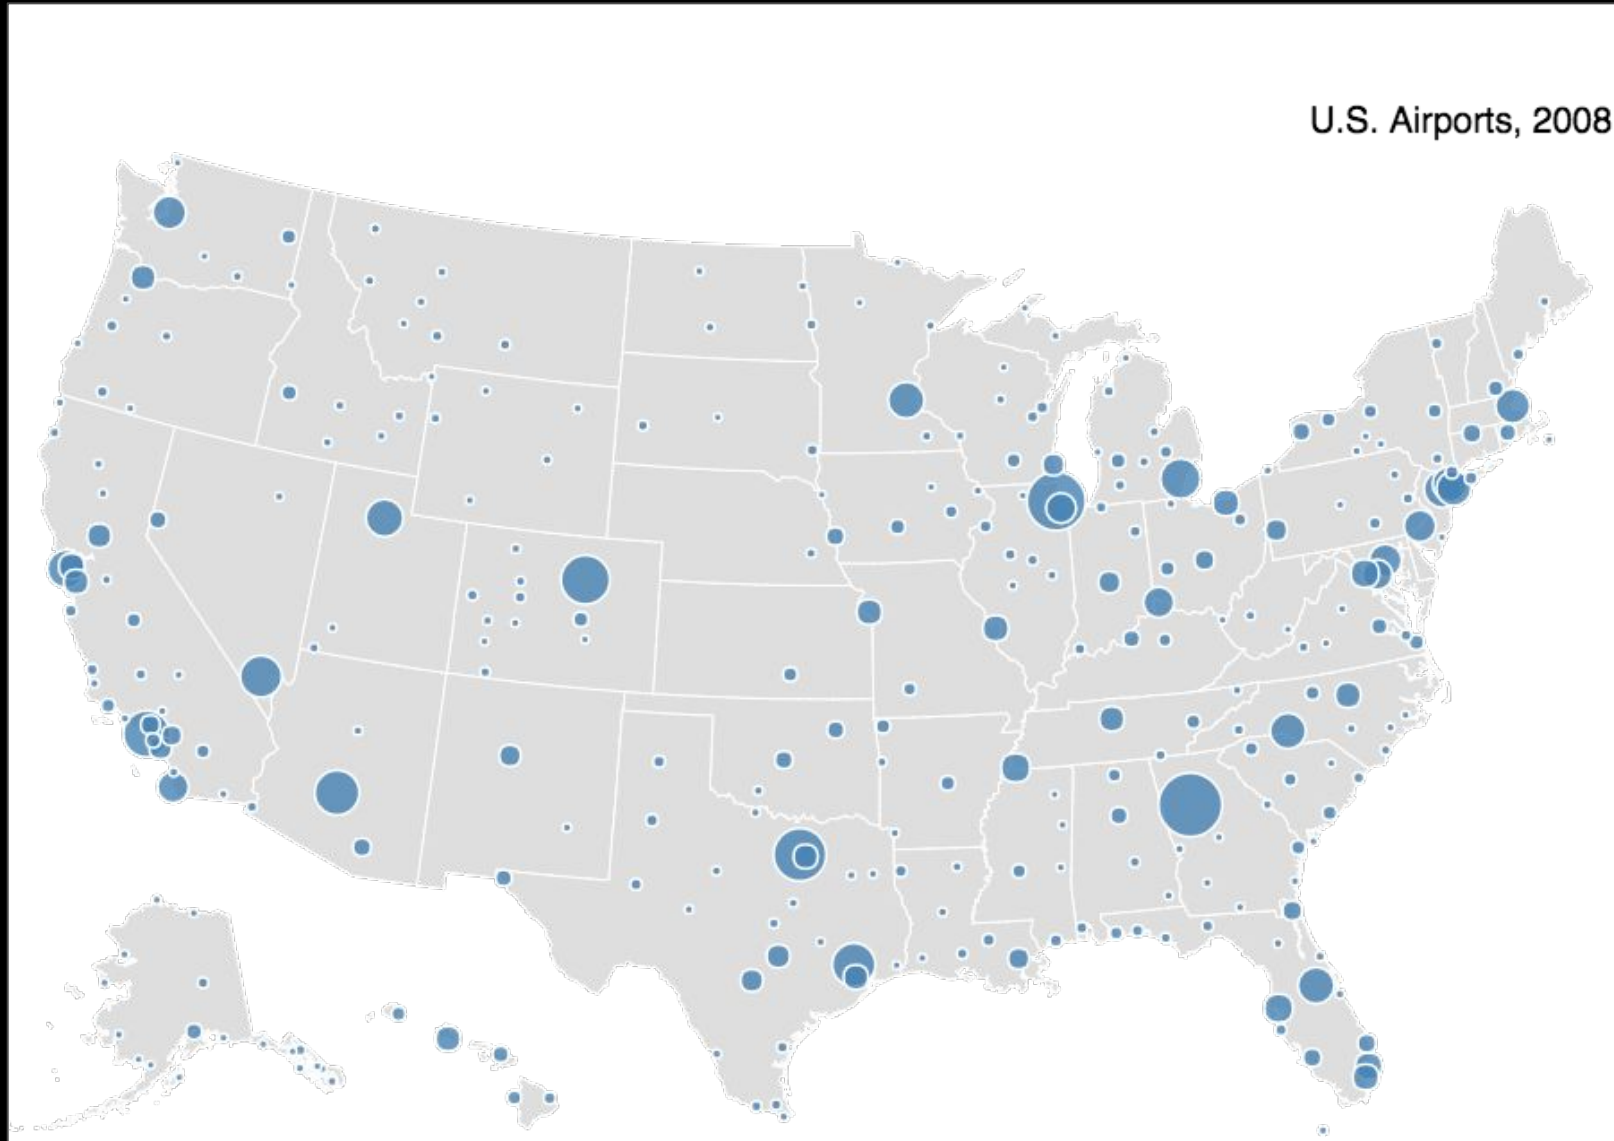

Interaction Layer

- Navigation: Pan, Zoom, Scale, Rotate
- Transitions: Scrolling, Layers
- Staging and Animation
- Selection and Highlighting
- Filtering, Brushing & Linking
- Sorting
- Dynamic Queries

Selection & Highlighting
